4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **autopartscentury.com** for a **B2B manufacturer product catalog (tyre valves, export trade, RFQ-based, no cart)** site, generated on October 11, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

71/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Soft 404: every unknown URL returns HTTP 200 with homepage content; no 404.html in dist
2. **Info:** 696KB logo PNG (1024x1024) displayed at 40x40 and loaded eagerly on all 163 pages
3. **Info:** No BreadcrumbList JSON-LD despite visible breadcrumbs on all 163 pages
4. **Info:** Product schema missing offers/sku/mpn - ineligible for Google rich results
5. **Info:** Mobile product-page info grid overflows horizontally by 170px on all SKU pages

Quick Wins:

1. Resize logo to ~160px WebP (~5KB) - saves ~690KB on every first visit
2. Emit BreadcrumbList from BreadcrumbNav.vue - one component covers all 163 pages
3. Add FAQPage JSON-LD to pages already rendering visible FAQs (home, 6 categories, news)
4. Add fetchpriority=high + preload to first hero banner image
5. Link model-number cells in spec tables to sibling product pages (+508 exact-match internal links)

2. Audit Categories

2.1 Technical SEO

Score: 78/100

What Works

- 163/163 pages return 200 with perfect canonicals
- Valid sitemap.xml (163 URLs), /search correctly noindex
- Zero mixed content, clean URL structure, llms.txt present
- Good mobile viewport markup

Findings

Soft 404s site-wide Critical

Unknown URLs return HTTP 200 with homepage content; no 404.html emitted in dist; wastes crawl budget and dilutes signals

Recommendation: Emit static 404.html and configure host to return real 404 status; add 301 from non-trailing-slash to trailing-slash URLs

Non-trailing-slash URLs return 200 duplicate High

/about, /search etc. serve duplicate homepage content instead of 301 to /about/

Recommendation: Configure host redirect rules non-slash -> slash

All 163 sitemap lastmod identical Medium

Every URL stamped with build date; lastmod loses meaning for recrawl prioritization

Recommendation: Stamp lastmod from actual content change date in gen-sitemap.mjs

No security/cache headers Medium

vite preview sends no HSTS/CSP/Cache-Control (host-level config)

Recommendation: Configure production host headers: long-cache immutable /assets, security headers

2.2 Content Quality

Score: 74/100

What Works

- No thin product pages (404-582 words each)
- No duplicate or missing titles; natural spec-driven copy
- Clean heading hierarchy on inner pages; 4 strong ~2,200-word news articles

Findings

Near-duplicate sibling product descriptions High

29 groups covering ~60-70 of 148 product pages; e.g. VC-8 cap family identical except color word - risks SERP clustering/filtering of model pages

Recommendation: Add 1-2 differentiating sentences per sibling (vehicle applications, compatibility, packaging)

Homepage renders 3 H1s (hero carousel) High

Each hero slide outputs an H1

Recommendation: Keep first slide H1, demote slides 2-3 to div/p

161/163 titles exceed 60 chars Medium

Model-first titles are good but truncate in SERP

Recommendation: Trim suffix patterns to keep core model + category within 60 chars where possible

News articles lack author + internal links to products Medium

No E-E-A-T author signal, articles don't link to catalog pages

Recommendation: Add author/date byline and in-article links to relevant product/category pages

About page has no certifications Medium

No ISO/IATF/QA content anywhere on site

Recommendation: Add certifications + factory capability content to About

2.3 On-Page & Search Experience

Score: 77/100

What Works

- Intent mapping clean across page types; model-first titles match buyer queries
- Request Quote CTA + breadcrumbs on product pages; 100% spec-table coverage
- Homepage answers who/what/contact within first screen (visual score 82)

Findings

Mobile product-page info grid overflows 170px High

MOQ/Packaging/Lead Time grid doesn't collapse on 390px viewport - affects every SKU page

Recommendation: grid-cols-1 sm:grid-cols-3 on the info-box grid

508 unlinked sibling-model references in spec tables High

Spec tables list series models as plain text while each has its own page

Recommendation: Link model cells to their product pages - exact-match internal links

Subcategory pages lack consolidated comparison tables High

Category pages list products but no series-wide size comparison table - biggest featured-snippet opportunity; data already exists

Recommendation: Add consolidated model/size comparison table to each of 6 subcategory pages

WhatsApp float covers content on mobile Medium

FAB overlaps text/links on all pages at 390px

Recommendation: Reduce size / add safe-area offset on mobile

11 pages missing og:image Low

Some category/utility pages lack og:image

Recommendation: Set default og:image fallback

2.4 Schema / Structured Data

Score: 38/100

What Works

- Organization schema on homepage and Product schema on 148 product pages are valid JSON with absolute URLs
- No parse errors, no placeholder values

Findings

No BreadcrumbList anywhere High

Visual breadcrumbs render on all 163 pages but emit no schema

Recommendation: Emit BreadcrumbList JSON-LD from BreadcrumbNav.vue - one component change, SERP-visible result

Product schema ineligible for rich results High

Missing offers/review/aggregateRating and sku/mpn

Recommendation: Add mpn (model number), brand, and Offer (businessFunction/priceSpecification appropriate for B2B RFQ) to Product JSON-LD

14/163 pages have zero JSON-LD High

All category, news, about, contact pages have no structured data

Recommendation: Add CollectionPage to subcategories, Article/NewsArticle to news (headline, image, datePublished, author), ContactPage/AboutPage

FAQ sections without FAQPage markup Medium

Visible FAQs on home + 6 categories + 4 news pages; Google FAQ rich results deprecated for most sites but still valuable for AI surfaces

Recommendation: Emit FAQPage JSON-LD from FaqSection.vue

2.5 Performance (CWV)

Score: 72/100

What Works

- Route-level code splitting, 98.7% WebP images, zero webfonts, zero third-party scripts
- Broad lazy loading, prerendered SSG HTML

Findings

> **696KB logo PNG displayed at 40x40** Critical
>
> 1024x1024 PNG loaded eagerly in header on all 163 pages - largest single byte cost on the site
>
> **Recommendation:** Resize to ~160px WebP (~5KB)

> **Hero carousel images eager, no fetchpriority** High
>
> All 3 hero banners (1920x640 webp) load eagerly; LCP image competes with ~930KB eager imagery
>
> **Recommendation:** fetchpriority=high on first slide only, lazy-load slides 2-3, add preload

> **298KB products.js inside main bundle** High
>
> Full catalog hoisted into 356KB app bundle via SiteHeader/SearchBar imports - downloaded on every page
>
> **Recommendation:** Split search index into a lazily loaded chunk (dynamic import on search focus)

> **No srcset / width+height on content images** Medium
>
> Responsive sizing and CLS reserves missing
>
> **Recommendation:** Add width/height attrs; generate srcset variants for product images

---

2.6 AI Search Readiness (GEO)

Score: 72/100

What Works

- Fully pre-rendered HTML - trivially crawlable by AI bots
- Spec-compliant llms.txt, real HTML spec tables, consistent NAP

Findings

> **Zero certification (ISO/IATF) content** High
>
> AI answers about 'reliable tyre valve manufacturer' lean on certifications; site has none

Recommendation: Publish certifications + QA process content (About + homepage block)

Missing buyer-question content (MOQ/lead time/payment/shipping) High

Top B2B buyer questions not answered anywhere - AI engines can't cite the site for them

Recommendation: Add per-page or FAQ answers for MOQ, lead time, OEM, payment, shipping

robots.txt has no explicit AI-crawler policy Medium

GPTBot/ClaudeBot/PerplexityBot not mentioned (default allow)

Recommendation: Explicitly allow major AI crawlers in robots.txt

2.7 Images

Score: 70/100

What Works

- 100% alt coverage across 2,802 images with keyword-rich product/news alts
- 98.7% WebP, SEO-friendly filenames

Findings

Oversized logo PNG sitewide High

696KB PNG at 40px display

Recommendation: Replace with small WebP/SVG

Zero srcset anywhere High

Full-size images served to mobile

Recommendation: Generate responsive variants for hero + product images

No width/height attributes (CLS risk) Medium

Images lack dimension reserves

Recommendation: Add width/height or aspect-ratio boxes in ProductCard and product gallery

3. Action Plan

Phase 1: Critical Fixes Week 1

- Emit 404.html + configure real 404 status and slash redirects on host
- Resize 696KB logo to small WebP
- Fix mobile product info-grid overflow
- Homepage hero: single H1, fetchpriority on first slide

Phase 2: High-Impact Improvements Weeks 2-3

- BreadcrumbList JSON-LD from BreadcrumbNav.vue (all 163 pages)
- Product schema: add mpn/brand/Offer
- FAQPage JSON-LD from existing FAQ content
- CollectionPage + Article schema for category/news pages
- Link spec-table model cells to sibling pages (+508 internal links)
- Split search index out of main JS bundle
- Differentiating copy for 29 near-duplicate sibling groups

Phase 3: Content & Authority Month 2

- Certifications/QA content (About + homepage)
- MOQ/lead-time/OEM/shipping answer content
- Consolidated comparison tables on 6 subcategory pages
- News articles: author bylines + links to products
- Trim 161 over-long titles

Phase 4: Monitoring & Iteration Ongoing

- Capture drift baseline; re-audit after deployment to real host (headers, compression, real CWV)
- Per-page lastmod in sitemap
- Responsive srcset generation pipeline

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
